

Specification of Thermoelectric Module

TETC1-19910

Description

The 199 couples, 40 mm × 40 mm size module is made of selected high performance ingot and fabricated by our unique “soft” processes to achieve superior cooling/heating performance. The module is able to run million thermal cycles in 70 °C temperature change range with less 3% degrading. It is good for the need of frequently cooling down and heating up to 100 °C applications. If higher operation or processing temperature is required, please specify, we can design and manufacture the custom made module according to your special requirements.

Features

- No moving parts, no noise, and solid-state
- Compact structure, small in size, light in weight
- Environmental friendly
- RoHS compliant
- Precise temperature control
- Exceptionally reliable in quality, high performance

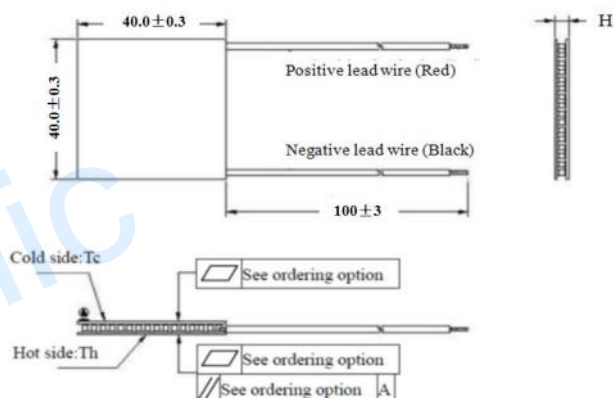

Application

- Food and beverage service refrigerator
- Portable cooler box for cars
- Liquid cooling
- Temperature stabilizer
- CPU cooler and scientific instrument
- Photonic and medical systems

Performance Specification Sheet

Th(°C)	27	50	Hot side temperature at environment: dry air, N ₂
DT _{max} (°C)	70	79	Temperature Difference between cold and hot side of the module when cooling capacity is zero at cold side
U _{max} (Voltage)	24.7	26.7	Voltage applied to the module at DT _{max}
I _{max} (amps)	10.5	10.5	DC current through the modules at DT _{max}
Q _{Cmax} (Watts)	167.1	179.9	Cooling capacity at cold side of the module under DT=0 °C
AC resistance(ohms)	1.83	1.97	The module resistance is tested under AC
Tolerance (%)	± 10		For thermal and electricity parameters

Geometric Characteristics Dimensions in millimeters

Manufacturing Options

A. Solder:

1. T100: BiSn (Tmelt=138°C)
2. T200: CuAgSn (Tmelt = 217°C)
3. T240: SbSn (Tmelt = 240°C)

B. Sealant:

1. NS: No sealing (Standard)
2. SS: Silicone sealant
3. EPS: Epoxy sealant

C. Ceramics:

1. Alumina (Al₂O₃, white 96%)
2. Aluminum Nitride (AlN)

D. Ceramics Surface Options:

1. Blank ceramics (not metalized)
2. Metalized

Flatness/ Parallelism Option

Suffix	Thickness (mm)	Flatness/ Parallelism (mm)	Lead wire length(mm) Standard/Optional length
TF	0:3.3 ± 0.1	0:0.08/0.08	100±3/Specify

Operation Cautions

- Attach the cold side of module to the object to be cooled
- Attach the hot side of module to a heat radiator for heat dissipating

- Operation below I_{max} or V_{max}
- Work under DC

Performance Curve

Performance Curves at $T_h=27^\circ\text{C}$

Performance Curves at $T_h=50^\circ\text{C}$

Standard Performance Graph $Q_c = f(DT)$

Standard Performance Graph $V = f(\Delta T)$

Standard Performance Graph $Q_c = f(V)$

Performance Curves at Th=27 °C

Performance Curves at Th=50 °C

Standard Performance Graph COP = f(V) of ΔT ranged from 0 to 30 °C

Standard Performance Graph COP = f(V) of ΔT ranged from 40 to 70 °C

Remark: The coefficient of performance (COP) is the cooling power Qc/Input power (V × I).

A typical 127 couples module is fabricated by the unique “soft” process and has demonstrated that it only has 2.5% degrading after 300,000 thermal cycling. The below graphic shows that in beginning 120,000 cycles, it degrade about 2.5%, and then go on stable with very tiny degrading in further 180,000 thermal cycles. It is derived out that the modules can go over million thermal cycles.
